

Small Vessel Treatment

Fact Sheet

What causes unsightly small vessels in the skin?

Red, blue, or purple vessels can be a result of sun exposure, use of oral contraception, hormone therapy, age, or genetics.

How does laser treatment work?

A cosmetic laser emits a prescribed dose of energy to the vessel. The laser "selectively" targets the blood in the vessel while sparing surrounding areas. Heat is created which damages the vessel causing it to disappear.

Does it hurt?

At Rejuvenate! client comfort is always of utmost importance. We are dedicated to providing safe, effective, essentially pain-free treatments. We have several methods to accomplish this including the use of topical anesthetic creams. At most, only minimal discomfort will be experienced. Slight redness or localized swelling can occasionally occur, but this usually subsides within the first 24 hours after treatment. The vessel may be discolored for a few weeks after treatment while it is absorbed by the body. You can resume normal activities immediately after treatment.

How many treatments are required?

Typically only one or two treatments are required and results can be seen in a few days to a few weeks. Treatment time usually varies between 10 and 20 minutes, depending on the size of the area treated.

How do I book treatment?

Call Rejuvenate! Med Spa today at 866.594.5476 for a free consultation. We will then arrange a treatment session that seamlessly fits into your schedule.
