

# SmartLipo™

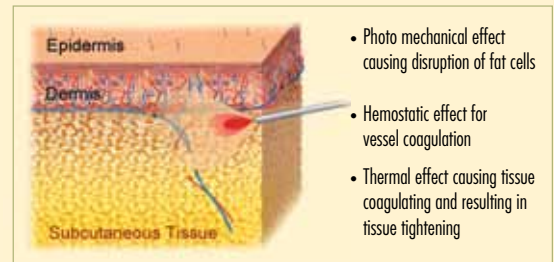

## Fact Sheet

### What is SmartLipo™?

As more women and men want to look and feel better about themselves, body contouring and lipo-sculpture continue to grow in popularity, making liposuction the most popular cosmetic surgery performed today. SmartLipo™ is the first and only laser-assisted liposuction system available to meet this need—and it is FDA-approved. It provides a revolutionary and minimally invasive procedure for the removal of unwanted fat. Instead of a relatively large cannula and suction, a high-powered laser is used to sculpt body contours and tighten skin, with less downtime and fewer side-effects.

### How does the SmartLipo™ procedure work?

A very small cannula, or tube, approximately 1.0mm (1/16 inch) in diameter contains the laser fiber and is inserted through the skin. The cannula is moved back and forth as the laser's energy is delivered directly to the fat cells, making them rupture and allowing the fat to drain away. In addition, as the laser energy interacts with the dermis it results in skin shrinkage or tightening. Due to the small size of the cannula, SmartLipo™ is a minimally invasive procedure and can be performed under local anesthesia. The procedure causes less bleeding, swelling and bruising than conventional liposuction methods, resulting in a quicker recovery time. Because general anesthesia is not used, the procedure is very safe and is associated with minimal side effects.

### Who is a good candidate for the SmartLipo™ procedure?

If you have areas of fat that will not respond to diet and exercise, then you're a candidate for SmartLipo™. Ideal candidates are in good health, of normal body weight and have realistic expectations for the procedure's results.

### What body regions can be treated with SmartLipo™?

It is ideal for treating small areas of the face, neck, arms, breasts (gynecomastia), abdomen and areas of loose and flabby skin. SmartLipo™ can also be safely combined with tumescent liposuction for the effective treatment of areas containing large volumes of unwanted fat.

### How many treatments will I need?

For most patients, typically only one treatment is required per treatment area. The session may last from 1 to 2 hours for each area treated.

### Are there any conditions that make SmartLipo™ inadvisable?

SmartLipo™ is an elective procedure and will only be recommended and performed if the likelihood of developing complications is extremely unlikely. The following conditions are contraindications to SmartLipo™: significant systemic illness, illness of the area of treatment, pregnancy or recent pregnancy within the last 3 months, allergy to lidocaine or epinephrine. For patients planning to undergo abdominal SmartLipo™, abdominal surgery or disorders of the lower abdomen (hernia, ulcerative colitis, Crohn's disease, spastic colon etc.) are contraindications.

# SmartLipo™

## Fact Sheet

### Do I have to do anything post-treatment?

After the treatment you will need to wear a compression garment for several days to several weeks, depending on the body area being treated and the amount of fat removed. Rest is recommended after the procedure and activity may be resumed gradually. Refrain from hot tubs or strenuous exercise for 2 weeks. Antibiotics will be prescribed beginning one day before treatment and will continue for 10 days post treatment to avoid infection. Light massage or MedSculpt treatment can begin 10-12 days post treatment.

### Does SmartLipo™ treat cellulite?

The procedure will improve the body's shape and may improve cellulite to a certain degree. At Rejuvenate! Med Spa we offer a special ultrasound/massage therapy for cellulite called MedSculpt which can be combined with SmartLipo™ for optimal results.

### When can I expect to see results?

Results can be seen as soon as a week after the treatment with continued improvement over several months as your body is producing new collagen which tightens your skin.

### What if I have large areas of unwanted fat?

SmartLipo™ can safely be combined with tumescent liposuction to get rid of large areas of accumulated fat. You will have the skin tightening effects of SmartLipo™ along with the larger desired volume reduction that can be achieved with the more traditional liposuction techniques.

### Does laser-assisted liposuction produce lasting results?

Yes! Adults do not create new fat cells. When a person gains weight, the fat cells expand. The SmartLipo™ procedure permanently removes the fat cells. Should you gain weight, most fat will be deposited in areas where the procedure was not performed.

### How do I book treatment?

Call Rejuvenate! Med Spa today at 866.594.5476 for a free consultation. We will then arrange a treatment session that seamlessly fits into your schedule.
