

# Spider & Varicose Vein - Laser Treatment

## Fact Sheet

### How does Rejuvenate! use laser technology to treat spider veins?

With a beam of light, the laser can deliver a prescribed dose of energy to the spider veins. The laser “selectively” coagulates the problem veins while sparing surrounding areas. After treatment, the vessel slowly and naturally disappears.

### How many treatments are required?

Results are seen within 3 to 4 weeks. Typically, 1 to 2 treatments are recommended.

### Is the treatment difficult?

No. This non-invasive treatment process typically takes less than 30 minutes. After treatment, there is no down time—which means you can resume all of your normal activities immediately.

### Does it hurt?

At Rejuvenate! client comfort is very important to us. We have the medical expertise and best technologies available to make your treatment as pain-free as possible. Laser spider vein treatment is a completely safe treatment causing, at most, only minimal discomfort. Clients often say it feels similar to the snap of a rubber band. Slight redness or localized swelling can occasionally occur, but this usually subsides within the first 24 hours after treatment.

### How do I book treatment?

Call Rejuvenate! Med Spa today at 866.594.5476 for a free consultation. We will then arrange a treatment session that seamlessly fits into your schedule.
